01

DIGITAL HIE INC

DirectTrust HISP Accreditation — HIPAA Compliance

At **Digital HIE Inc**, I led the organization through the rigorous **DirectTrust HISP accreditation** process, ensuring compliance with **HIPAA**. I was the primary technical lead and author to implemented end-to-end **compliance** documentation, security **policies**, operational **procedures**, and audit **evidence's** for the platform **architecture**, secure messaging **workflows**, **encryption**, and **interoperability** infrastructure. I was able to achieve the accreditation readiness within **4 months** while simultaneously managing day-to-day engineering and operational responsibilities.

- HIPAA
- DirectTrust HISP
- Secure Messaging
- Encryption
- Interoperability

02

COGNIZANT / LINCOLN FINANCIAL GROUP

Project Lead — Federal Insurance Mainframe Migration

My first experience as a **project lead** (with less than an year of work experience) for **Lincoln Financial** group via **Cognizant**, for a high-priority modernization initiative to migrate **Federal Insurance** Match and Child Support Lien Network (CSLN) integrations from legacy **IBM Mainframe** and **S2K** databases into automated **ETL**-driven data pipelines. I Developed core **migration** and **integration** logic, writing hundreds of lines of **production** code in **Cobol**, while coordinating **four** cross-functional **teams** spanning **three time zones** during the COVID-19 pandemic. Successfully delivered the project within a compressed **6-month** timeline.

- Cobol
- IBM Mainframe
- S2K
- ETL Pipelines
- Federal Insurance

03

CAPITAL ONE

Next-Generation Transaction & Account Stores Architecture

Challenged and influenced the architecture for next-generation **Transaction** and **Account** Stores at Capital One, supporting **130M+** unique accounts across **Card, Bank, Auto**, and **Global** Finance. Delivered end-to-end application services hosting it on AWS cloud Infra within **8 months**, achieving pre-production readiness with real production data. Designed a reusable, **"code-once" architecture** adopted across four services deployed across multiple AWS accounts. Built **Terraform**-based infrastructure from scratch enabling automated cross-region failover from us-east-1 to us-west-2. Independently led development of the **Transaction Store** with **~98%** test coverage, while also contributing as a core team member to **Account Store** development.

- AWS
- Terraform
- DynamoDB
- Go
- Lambda
- Multi-Region
- 98% Coverage
